

Data Processing Services

quality knowledge | quality service | quality control

EPI supplies consultants and systems as part of a package, or separately, for a wide variety of processing projects.

Our Specialists

EPI has a team of highly qualified processing staff consultants with a very wide spectrum of experience.

We supply processors for all types of land and marine data, 2D, 3D and 4D including processors for 4 component P & S wave technology.

EPI supplies:

- Experts for the QC of main-frame processing in Contractor's processing centres
- Processing QC representatives to overview the contractor's on-crew processing
- Hands-on processors to operate ProMAX® and other field seismic processing systems

Our ProMAX Systems

EPI's first ProMAX® system was acquired from Advance Geophysical in 1993. Ever since then we have supplied purchase and rental ProMAX® systems for field operations.

We have built systems, often at very short notice, using a variety of hardware platforms, SUN, SGI, IBM etc. We use the latest available hardware platforms that are supported by software and top quality peripheral devices such as:

IBM 3592/3590 | Fujitsu 3490/3480 | Fibre channel RAID storage | Gigabit Ethernet
OYO GS 624/636 thermal plotter | High resolution graphics and monitors
SDI Netlink with SDI Printmastertm

Our Clients

Over the years, we have supplied our processing systems and services to a great number of our oil company clients as well as to many of the seismic contractors.

EPI supplies:

- Staff consultants and systems as part of a planned operation
- Staff consultants and systems often at very short notice for emergency/overflow work
- Staff consultants and systems when others fail to satisfy a client's requirements
- Staff consultants working with processing houses
- Exploratory processing services in-house

Let EPI help with your seismic data processing and data processing QC requirements.
